

Moving maintenance from the calendar to the condition

Move the scheduled budget into condition-based maintenance

Calendar maintenance keeps paying for downtime it cannot see coming; a condition view catches most stops before they happen.

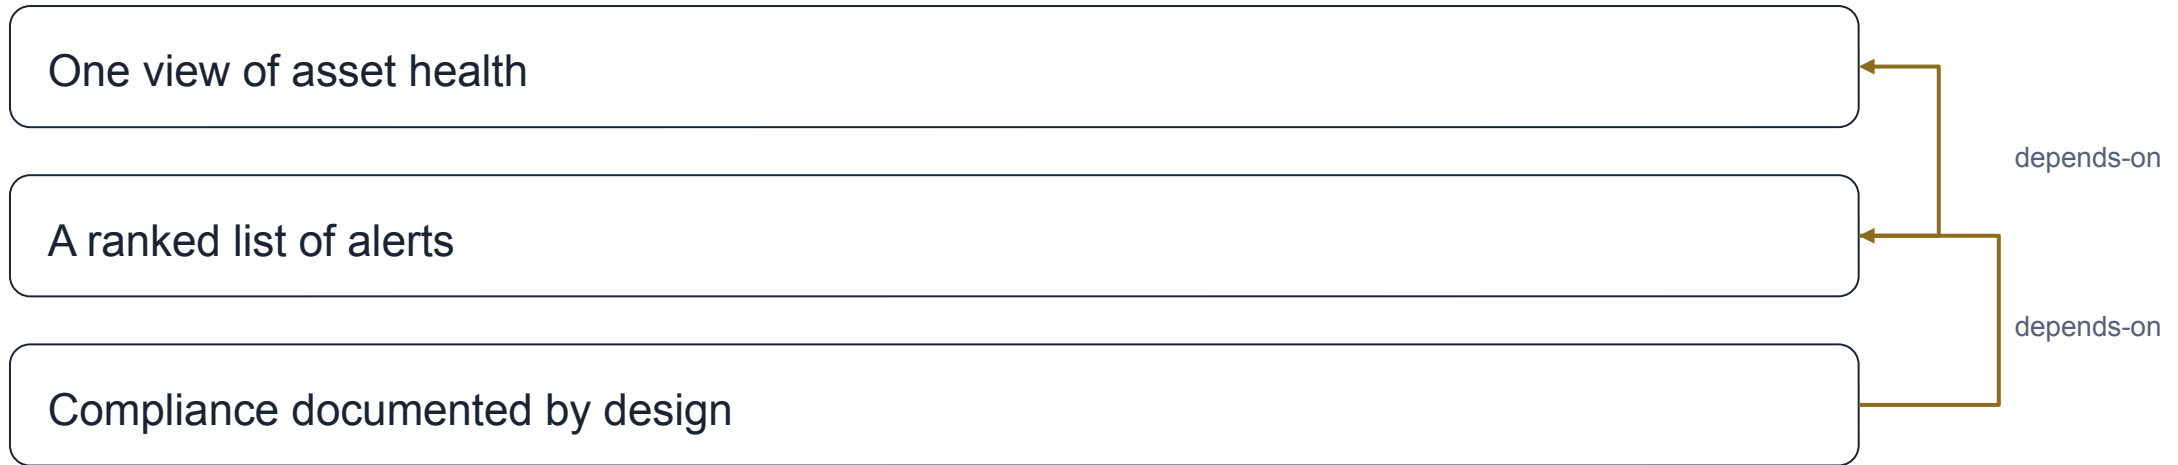

- | Today: maintenance by the calendar
- | Fixed intervals, surprise failures; most stops announce themselves first and go unread.
- | Tomorrow: maintenance by the condition
- | One view of every asset and one ranked list of alerts, so technicians act before the stop.

Four costs stack on the same three-year horizon

Downtime dominates, and the three smaller costs compound it.

Three parts make one asset-health capability
